

ERGOFLIER™ B21

Product Number

EF-BT-21

The ErgoFlier™ B21 is our high-end keyboard platform support arm. The key features of this product are the superior independent height and tilt adjustment controls. The ErgoFlier™ B21 incorporates a spring brake mechanism to adjust the height. Simply depress the paddle actuator and freely move the platform to the desired height. The tilt angle is adjusted by pulling a latch found near the front of the platform. This changes the angle depending on the typing position. The user is able to pin point the exact tray tilt angle as it is displayed on a tilt indicator located on the neck of the arm. Additional features include 360° swivel and is storable on a ball bearing track.
