

The BodyBilt S T R E T C H™ chair is long on comfort.

ERGOGENESIS introduces the seated solution for the not heavy, “taller than average seated worker. The S T R E T C H seat is 4” longer than our standard contoured seat (seat pan #7). It is also 3” narrower than our wide contoured seat (seat pan #4). It is less contoured than either the #7 or the #4. Multiple layers of foam combine with anatomical contours and unique recesses to reduce seated pressure.

Standard Features
