

ROHO NOW AVAILABLE WITH **BODYBILT**
TECHNOLOGY SEATING SOLUTIONS

UNSURPASSED COMFORT.

PROVEN MEDICAL TECHNOLOGY.

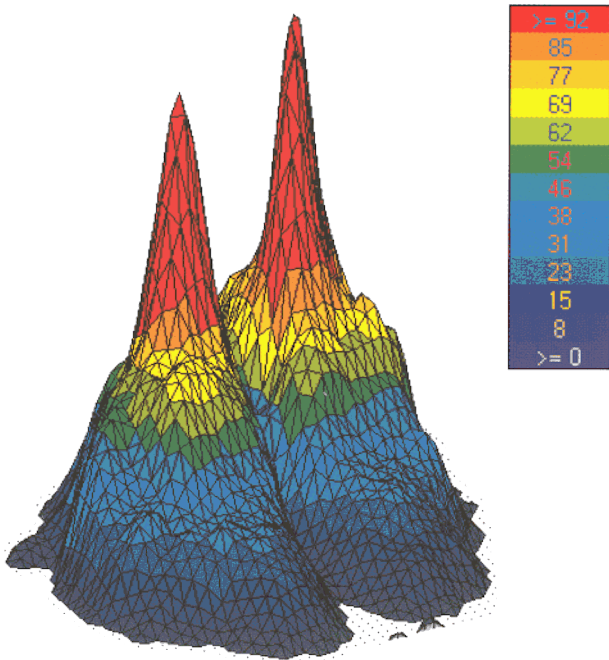

For 30 years. The ROHO Group has been providing enhanced postural support, skin protection and comfort for wheelchair users all over the world. Now, this patented seating technology is available in conjunction with BodyBilt Seating Solutions.

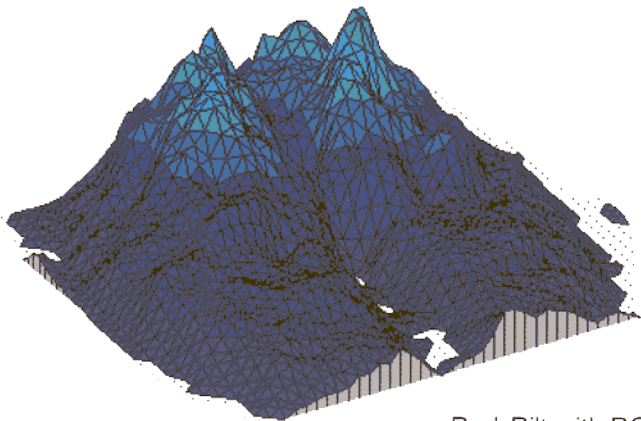

The secret is ROHO[®] DRY FLOATATION[®] Technology under the surface and perfectly positioned in BodyBilt's contoured seat. Individual, interconnected air cells allow to slowly transfer from chamber to chamber as the user moves. This hybrid of exceptional seating concepts distributes body weight like no other chair and virtually eliminates seated pressure caused by flat seats. It even enhances blood flow to the buttocks and legs.

For more information on this latest technology, contact ErgoGenesis at (800) 364-5673 or visit us at www.ergogenesis.com.

Brand X

BodyBilt with ROHO

Pressure Mapping Proves the Difference

The charts show the dramatic difference in seated pressure between BodyBilt's contoured seat with S'port™ Foam and ROHO technology versus the flat seat design of a well-known competitor. The red and yellow peaks highlight the intensity of pressure inflicted on sensitive points by the flat seat in a normal seated posture. It's that high pressure and the resulting restriction in blood flow that cause the user to shift and squirm in the chair which leads to poor seated postures, and that is directly linked to seat discomfort and body aches. Compare that to the cool blue comfort of those same pressure points as they float on BodyBilt's new ROHO seat option.

Independent testing done by The Ergonomic Center of North Carolina* documents the impressive difference the new BodyBilt / ROHO seat can make, but a test-drive is all you'll need to know how great it feels.
