

PRESSURE MAPPING RESULTS

**FLAT SEAT DESIGN
of
WELL-KNOWN CHAIR**

Flat seat pan with thin foam results in high pressure on sitting bones causing seated discomfort. The Yellow - to - Red peaks indicate pressures at double those found with the contoured BodyBilt seat with *S'port* (memory) foam and *Comfortek* fabric (shown right).

**BODYBILT'S CONTOURED SEAT with
Comfortek[™] Fabric and *S'port*[™] Foam**

The BodyBilt Seat with *Comfortek* and *S'port* (memory) foam cushions the user while the contours effectively disperse seated pressure and the unique recessed *Ish-Dish*[™], virtually eliminates the "bottoming-out effect".
